CENTER FOR SIGHT

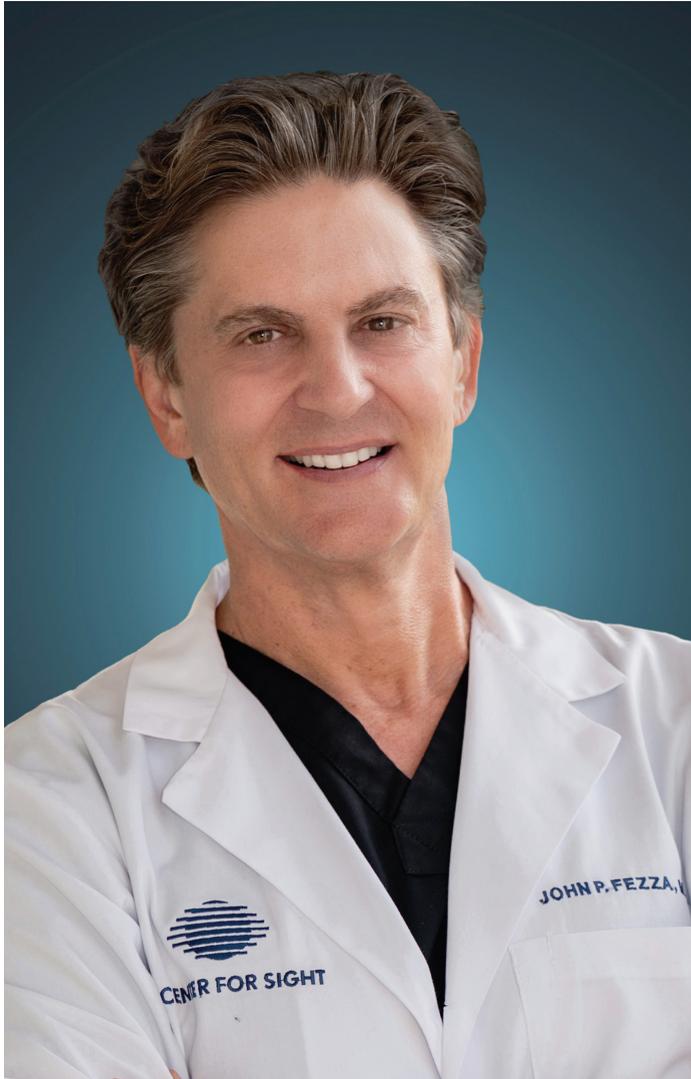

A US EYE COMPANY

This brochure features before and after photos of Dr. Fezza's patients providing valuable insight into his surgical skill, consistency, and ability to achieve natural looking results. These images showcase real patient transformations; however, results vary based on the surgeon's expertise, which is why choosing an experienced, board-certified surgeon is crucial. Dr. Fezza understands facial aesthetics and customizes procedures to each patient's needs, ensuring not only technical precision but also an artistic eye, leading to safer procedures and more satisfying outcomes.

JOHN P. FEZZA, MD

John P. Fezza, MD, earned his undergraduate degree at Duke University and received his medical degree from New York Medical College, where he was president of Alpha Omega Alpha honors society. He completed an internship in general surgery, and residency in ophthalmology at Yale University. He then completed his 2-year ASOPRS fellowship in oculoplastic surgery at Vanderbilt University, and a second fellowship in cosmetic surgery through the AACS. He has many years of subspecialty training focusing solely on eyelid, face, and neck surgery, which he considers his passion. Dr. Fezza is dedicated to helping his patients look and feel great by achieving natural results. His expertise couples the latest surgical techniques using hidden incisions, coupled with the use of laser for skin smoothing.

Dr. Fezza has been the director of cosmetic and skin services at the Center For Sight in Sarasota, Florida since 1998. He has repeatedly been honored as one of America's "Top Doctors" by Castle Connolly and *U.S. News and World Report* for over a decade. He was also chosen as the "Best Plastic Surgeon" in Sarasota, Venice, and Manatee Counties from 2016-2021 by the *Herald-Tribune* Reader's Choice Award. He has been involved in several FDA trials and holds many medical patents. His interests include advances in facial cosmetic surgical techniques along with filler and neuromodulator injections. Dr. Fezza enjoys his own great sense of humor, as well as a myriad of outdoor athletic activities; whether it's exercising, surfing, skiing, golf or tennis. Most of all, he cherishes the time he shares with his wife, Heidi, and his three sons.

LOWER DEEP PLANE FACELIFT AND NECKLIFT

A facelift, or rhytidectomy, will provide you with an overall lift to the lower one-third of your face, tightening loose muscles and reducing redundant skin and fat in the jowls, neck area and jaw line. A facelift provides a cleaner appearance of the lower face by creating a sharper angle between the jaw and neck. Dr. Fezza often performs the deep plane facelift procedure to create the most natural results.

Dr. Fezza strives for a natural and rested appearance that looks like a younger version of yourself.

TERESE'S DEEP PLANE FACELIFT JOURNEY

This is Dr. Fezza's OR circulating nurse, Terese, who has worked in plastic surgery for several decades. She has cared for my surgery patients over the years and has been gracious enough to share her journey. She has wonderful results, and I think you will agree this enhanced her natural beauty.

BLEPHAROPLASTY (EYELID TUCK)

Eyelid surgery, or blepharoplasty, corrects these conditions by removing the excess skin from upper lids and the fatty pouches underneath the eyes. Dr. Fezza uses laser technology to perform eyelid surgery with a special technique designed to hide the incisions inside the eyelid so no skin incision or sutures are needed on the lower lids.

BROW LIFT

A brow lift tightens the skin of the forehead and brow. The overall effect is to give your eyes a younger, rejuvenated appearance. The frown lines in between the brows are reduced and softened at the same time (raising the eyebrows, providing a smooth, youthful arch).

FULL FACE LASER RESURFACING

Laser skin resurfacing uses a CO2 laser to reduce facial wrinkles and sun damaged skin. It can also remove age spots and superficial skin pigmentation. The laser's first pass removes the old skin. The laser causes the collagen and elastic tissue in the underlying layers of the skin to tighten, resulting in smoother, healthier and younger looking skin.

BEFORE

AFTER

Laser skin resurfacing offers significant benefits for those wanting to reduce wrinkles, age spots and uneven skin texture, resulting in a smoother, more youthful complexion. This treatment stimulates collagen production, improving skin elasticity and firmness over time. It can also help minimize the appearance of scars and sun damage, enhancing overall skin tone.

With modern advancements in laser technology, recovery times have improved, making it a safe and effective option for rejuvenation. Proper aftercare and sun protection are essential to maintain long-lasting results.
